

Greetings! Today marks the beginning of the third block of the LSI medical school curriculum, Bone and Muscle Disorders. This block spans November – early December. We are excited to continue this curriculum and value your collaboration and support in making it a success. Hopefully, most of you have already met your LP student(s). I can honestly say they are excited about this opportunity.

For each session, the students should arrive on time, be professionally attired and continue to practice professionalism and teamwork with everyone in the office. **We would like you, the physician preceptor, to watch the student do a chief complaint and history of present illness and to give the student feedback on what they did well and what they could improve upon.** We would also like you to begin “thinking out loud” as you develop differential diagnoses on a few patients with input from the students during this block. This document on feedback is a good resource: [LP Preceptor Teaching Tools | Ohio State College of Medicine \(osu.edu\)](https://www.osu.edu/med/education/teaching-tools/lp-preceptor-teaching-tools)

Listed below are the milestones the students have received and are expected to complete during these sessions. If the word “practice” is listed, the student should independently log and track their own experiences. If the words “directly observe” are listed, then those items should be observed and signed off by the person who observes the skill.

Bone and Muscle Disorders: November-December

LP1- 3 sessions

LP2- 3 sessions

This includes the orientation session in October.

By December 16, 2022

- *Practice interviewing patients and obtain chief complaint and HPI*
- *Practice documenting a patient’s HPI (does not need to be in the EHR)*
- *Practice hip, shoulder, knee, or back/spine PE*
- **Have 1 direct observation of obtaining chief complaint and history of present illness, WITH feedback (from preceptor)**

Items in italics must be logged by students.

Items in bold require direct observation and should be completed on the student’s iPad.

Prior to arrival in your practice the students will have successfully completed sessions in Longitudinal Group on the MSK physical exams.

We are delighted to have you participate in this program and welcome feedback and suggestions. Thanks so much for allowing us to integrate your practices and expertise into the curriculum!

Please let us know if you have any questions!
