4th Annual Conference

ULTRASOUND IN ANATOMY AND PHYSIOLOGY EDUCATION

Society of Ultrasound in Medical Education

Ultrasound can enhance the teaching of the foundational sciences of anatomy and physiology by providing real-time demonstration of structure and function. This two day course will pair short presentations with hands-on exercises to provide specific examples of how ultrasound can be used to teach anatomy and physiology in the pre-clinical medical curriculum. Participants will follow our designed, hands-on exercises that can be implemented at their home institutions. Additional presentations will discuss: how an investment in ultrasound in medical education is an investment in the future of health care, how sonographers can be tapped as a resource to help teach ultrasound, and how ultrasound can be used to teach embryology.

Attendees will learn:

- how to translate the knowledge-base of anatomy learned in the dissection laboratory to teach anatomy and physiology using ultrasound;
- how ultrasound forms a natural bridge between foundational and clinical sciences;
- how to meet the challenge of integrating ultrasound into the medical curriculum by networking with other schools who have met these challenges.

The mission of the Society of Ultrasound in Medical Education (SUSME) is to promote the use of ultrasound in medical education through development of educational experiences, research on outcomes, and distribution of results. For more information, visit susme.org.
Join Us March 11-12, 2016

The introduction to ultrasound session will begin on Friday from 8:00 am to noon. The main meeting will begin at 1:00 pm to 4:30 pm and reconvene on Saturday from 8:00 am to 4:30 pm. A keynote presentation will be given by Dr. Richard Hoppmann, Director of Ultrasound Institute at the University of South Carolina School of Medicine, at the reception on Friday evening.
