Postdoctoral Position in Bacterial Pathogenesis

The McBride laboratory at Emory University School of Medicine is seeking a self-motivated postdoctoral researcher to investigate the mechanisms of sporulation in the pathogen *Clostridium difficile*. The laboratory employs a variety of *in vitro* and *in vivo* approaches to explore the genetic mechanisms and host cues involved in spore formation, including molecular biology, biochemistry, and animal models of disease. Basic requirements include a Ph.D. in Microbiology or a related area. Successful applicants will have a solid publication record, strong oral and written communication skills, and the ability to work effectively with others. Highly desired skills include experience in bacterial genetics, biochemistry, or animal models of infection.

Salary is based on the NIH scale and includes benefits. Interested individuals should send a cover letter stating research interests and suitability for this position, a CV and the names and email for three references to shonna.mcbride@emory.edu

*Emory University is an equal opportunity employer. Women, minorities and other underrepresented groups are highly encouraged to apply.*
