A postdoctoral position is immediately available to investigate correlates of vaccine-induced immunity against melioidosis and glanders. The successful candidate will be responsible for developing glycoconjugate-based vaccines and evaluating their immunogenic/protective capacities in preclinical studies. They will work in a highly collaborative environment to develop these vaccines as well as participate in the preparation of manuscripts and grants, present data at national and international meetings, and assist in the training of students.

Minimum qualifications include a Ph.D., M.D./Ph.D. or D.V.M. in Microbiology, Immunology, Molecular Biology or related field. Expertise in humoral and cellular immunity, flow cytometry and small animal models of infection will be considered an asset. Experience handling Gram negative bacterial pathogens (especially *Burkholderia pseudomallei* and/or *Burkholderia mallei*) is desirable as is familiarity with Biosafety Level 3 (BSL-3) standard operating procedures. Strong communication skills and a commitment to collaborative research are also sought. The successful candidate must be suitable for Department of Justice clearance to work in select agent laboratories. A recent graduate is preferred.

Interested candidates should email their CV, a cover letter and the names and contact information of three references to:
