### Restraints for Non-Violent Behavior

**Soft Limb Restraints (Quick)**
- Patients assessed to be at risk of disrupting life-saving treatments (e.g., chronic tube pulling)
- Patients assessed to be at risk of line pulling, which may prevent monitoring of vital signs
- Patients whose picking, pulling, scratching, or peeling exacerbates a skin condition, causes self-injury or injury to others, or compromises wound site integrity

**Posey® E-Z-On Mitt without straps**
- Patients assessed to be at risk for disrupting life-saving treatments (e.g., chronic tube pulling)
- Patients assessed to be at risk of line pulling (arterial or central lines), which may prevent monitoring of vital signs
- Patients whose picking, pulling, scratching, or peeling exacerbates a skin condition, causes self-injury or compromises wound site integrity

### Restraints for Violent or Self-Destructive Behavior

**Leather Restraints**
- Violent or Self-Destructive Behavior – Patient presents an immediate danger to self or others
- Non-violent behavior – in some rare cases, may be considered when soft limb restraints are not effective in keeping patient from pulling at lines/etc (e.g., physically strong patient)

**Canvas Limb Restraints**
- Patients assessed to be at risk of disrupting life-saving treatments (e.g., chronic tube pulling)
- Patients assessed to be at risk of line pulling, which may prevent monitoring of vital signs
- Patients whose picking, pulling, scratching, or peeling exacerbates a skin condition, causes self-injury or injury to others, or compromises wound site integrity
